Kautilya

Custom software for India's *family businesses.*

We sit with a business, find the real problems in how it runs, and build the exact software to fix them. Every build starts from a problem worth solving, not a product to sell.

- ✦ Built around how you work, not off-the-shelf
- ✦ Yours to keep · no SaaS lock-in
- ✦ Senior-led · Mumbai

Capabilities & selected work · 2026

dev@pocket-fund.com · Mumbai, India

THE GAP WE FILL

A business you've built over years, *now held back by how it runs.*

The things that worked when the business was smaller start to strain as it grows: work still done by hand, software bought off the shelf that never quite fit, and no single, clear view of the whole operation.

Manual work that doesn't scale

Reconciliations, order tracking, scattered records, the month-end scramble, done by hand, taking more of your team's time as the business grows.

Off-the-shelf that doesn't fit

Generic software forces your business into someone else's template, so your team works around the tool instead of the tool working for them.

No clear view of the operation

The numbers you need live across spreadsheets, inboxes and paper, so you learn about problems late, not as they happen.

WHAT WE BUILD

The problems we're *built to fix.*

01

Run on spreadsheets and memory

The business still runs on scattered files and what people happen to remember. We build one system that fits how you actually work, and it's yours to keep.

02

The same manual work, every day

Your team redoes the same tasks by hand every single day. We put AI on the repetitive work, so it gets done on its own and people are freed for the rest.

03

You only find out at month-end

Problems surface weeks after they start, once the numbers are finally pulled together. We build dashboards that show you the truth of the business, daily.

04

You don't look as established as you are

Online, the business looks smaller than the standing it has earned. We build the website and brand to match, so you present as what you are.

HOW WE'RE DIFFERENT

Four principles behind everything we ship.

Custom, not compromised

Built around your process, formats and edge cases, it fits like it was made for you, because it was.

AI where it earns its place

Claude for the hard parts, parsing messy documents, spotting anomalies, drafting outreach. No AI theatre.

Software you own · no lock-in

No per-seat SaaS meter, no vendor holding your roadmap. Deploy on your infra when privacy demands it, or we build and run it for you.

Senior-led & fast

You work directly with the builders, fewer handoffs, tighter loops, software that ships.

SELECTED WORK

Real problems, *real software.*

A few of the businesses we work with, each one a real operational problem, and the custom software we built or are building to fix it. Every engagement runs on the client's own systems.

JADE	**Design, making and selling that didn't join up.** One connected software suite to run the whole couture house, plus a WhatsApp AI assistant.	Live suite
Furtados	**Nightly store numbers pulled together by hand.** Software that gathers them on its own into one clear report before the day opens.	In progress
Palette Wealth	**A newer advisory with no way to signal trust online.** A private-wealth brand experience that earns family-office confidence from the first visit.	◇ In design
Chanakya School of Craft — Chanakya	**Orders and artisans scattered across paper and chat.** One live view of the whole atelier, on their own systems.	◆ Client

JADE

COUTURE SOFTWARE SUITE

Client · Live suite

Luxury fashion · couture & bridal · JADE by Monica & Karishma

THE PROBLEM

JADE designs, makes and sells couture under one roof, but the collection, the making of each piece and the customer conversations all lived in separate places, so nothing joined up and too much depended on people remembering.

THE CUSTOM SOFTWARE WE BUILT & RUN

- **Fashion CRM.** One place to run every collection from first sketch to finished piece: designs, production boards you drag and drop, suppliers and samples, and clear targets for each person.
- **Order & production system.** Follows a piece through the whole making process: order, pricing, work sent to tailors, materials, quality checks, finished goods and billing, all in one flow.
- **Tina, a WhatsApp AI assistant.** Answers customers, recommends real pieces at real prices, matches a photo to the exact piece, and hands over to a person when needed, plus helps staff with their tasks.

Web app | AI | WhatsApp | Runs on their systems

WHAT CHANGED

One connected house	design, making and selling now run in one joined-up system
Less in people's heads	the process holds the detail, not memory and messages
Always on	customers answered on WhatsApp, staff helped through their day
Theirs to keep	built for JADE and running on their own systems

"JADE designs, makes and sells couture under one roof, so we built the software for all of it, and we run it."

Kautilya, on the JADE engagement

Furtados Music

STORE INTELLIGENCE BOT

◐ In progress

Multi-store retail · musical instruments · Mumbai

THE PROBLEM

A chain of stores each sent its nightly numbers in a different format, Excel, spreadsheets, PDFs, and someone had to pull them together by hand every morning, so problems only surfaced late.

THE CUSTOM SOFTWARE WE BUILT

- Each store's nightly report is collected automatically from one shared inbox, every night.
- Mixed Excel, spreadsheet and PDF reports are tidied into one consistent format.
- AI reads even off-template reports and explains anything unusual in plain language.
- Each store is compared against its own recent average, so odd numbers get flagged.
- One clear summary email lands before the next day opens; adding a new store is a quick setting change.

Automation · AI · Runs on their systems

WHAT CHANGED

No more morning crunch	the nightly number-gathering now happens on its own
One clear report	every store's numbers, in one place, before the day opens
Problems, same day	gaps, missing reports and unusual expenses flagged early, not month-end
Their data stays put	on their own systems, no SaaS lock-in

"The numbers now land as one report before stores open, and month-end surprises surface the same morning."

Kautilya, on the Furtados engagement

Palette Wealth

WEBSITE & BRAND

◇ In design

Private wealth management · family-office advisory · Mumbai

THE PROBLEM

A newer advisory courting wealthy families had nowhere online that signalled the permanence and discretion those clients expect, so credibility had to be rebuilt in every conversation, from scratch.

THE CUSTOM SOFTWARE WE'RE BUILDING

- A premium, editorial website that speaks clearly to wealthy families and family offices.
- Storytelling built around the founders and their track record, the reason a visitor reaches out.
- Fast, private and self-contained, running on the client's own systems.
- A foundation designed to grow into a private client portal down the line.

Website · Privacy-first · Runs on their systems

WHAT IT DOES FOR THEM

Trust up front	present with the polish and permanence of an established name
Credibility first	founder track record leads, so referrals arrive already warm
Private by design	self-contained, on their own systems, no lock-in
Built to extend	ready to grow into a private client portal

"For a firm this new courting family offices, the site has to signal permanence and discretion before a single conversation."

Kautilya, on the Palette Wealth engagement

Chanakya

ATELIER & CRAFT ARCHIVE

◆ Client

Luxury craft · haute-couture hand-embroidery atelier · Mumbai

THE PROBLEM

A haute-couture atelier was running its orders, artisans and deadlines across spreadsheets, email, WhatsApp and paper, with no single view of the work, and confidential unreleased designs scattered across it all.

THE CUSTOM SOFTWARE WE'RE BUILDING

- **One live view** of every couture order, artisan and deadline, plus a searchable craft archive, all on Chanakya's own systems.
- **Step by step:** production tracker → orders and approvals → time and pricing → a lasting craft and heritage archive.

Web app | AI | Runs on their systems

WHAT IT WILL DO FOR THEM

One live view	replaces scattered spreadsheets, email, WhatsApp and paper
At a glance	who's working on what, hours and deadlines, live
Faster quoting	consistent estimates for new commissions
Stays in-house	confidential unreleased designs never leave the atelier

"A couture house deserves a single live view of its work, one where those confidential designs never leave its own systems."

Kautilya, on the Chanakya atelier system

HOW WE'RE DIFFERENT

Four things that set us apart.

Built to fit

custom software shaped to your business, never off-the-shelf

You own it

no per-seat SaaS, no lock-in, the software is yours

AI-native

modern AI, used only where it removes real work

Senior-led

a Mumbai team you deal with directly

HOW WE WORK

Scoped to the real problem. *Shipped in tight loops.*

01

Understand

We map how the work actually happens, tools, formats, handoffs, edge cases. Scope the real problem.

02

Design

Shape the solution around your process & infra. You see the plan and the stack before we build.

03

Build & deploy

Senior engineers build in tight loops, deploy on your own server or cloud. Progress early and often.

04

Run & extend

Ship a working system, then scale it, a new store is a config change; a dashboard is the next phase.

WHY KAUTILYA

Built for how a family business actually runs.

- We start from your problem, not a product, we build the software your business actually needs.
- Off-the-shelf makes you change how you work; we build around how you already work.
- Modern AI, used only where it removes real work, never as a buzzword.
- Software you own, no SaaS lock-in, no per-seat pricing; deploy on your systems or we run it.
- Mumbai-based & senior-led, you deal directly with the people writing the code.
- Discreet and long-term, we understand a business built over years, and we treat it that way.

Kautilya

Let's fix the problem *holding your business back.*

Tell us where the business strains, the manual work, the blind spots, the tool that never fit. We'll build the exact software to fix it: custom, yours to keep, run on your own systems or by us. Senior-led, Mumbai-based, no SaaS lock-in.
