CUSTOM SOFTWARE FOR INDIA'S FAMILY BUSINESSES

Custom software for India's *family businesses.*

We sit with your business, find the real bottlenecks, the manual work, the blind spots, the month-end scrambles, and build the exact software to fix them. We start from the **problem, not a product**. Software you own, not another per-seat SaaS.

WHAT WE FIND AND FIX

Work still run on spreadsheets & chats → we build the tool that runs orders, jobs & approvals.

Staff buried in the same manual task → we build automations that read inboxes and apply your rules.

Clients & orders tracked in someone's head → we build a CRM shaped to how your business actually sells.

Numbers only clear at month-end → we build a dashboard that shows where you stand today.

A site that doesn't match your standing → we build a premium, private one that earns the right intros.

Hours lost cleaning & matching messy data → we build it to sort, check & reconcile on its own.

SELECTED WORK

JADE
SOFTWARE SUITE · Live suite

Luxury fashion · couture & bridal · JADE by Monica & Karishma

The problem: a couture house running collections, the workshop floor and customer enquiries on scattered spreadsheets and chats. **What we built:** software that runs every collection, tracks orders through production, and answers customers on WhatsApp, one house, one system.

Fashion CRM · order & production · **Tina**, a WhatsApp AI assistant

Furtados Music
STORE INTELLIGENCE BOT · In progress

Multi-store retail · musical instruments

The problem: pulling each store's numbers together by hand every night, with issues surfacing days too late. **What we built:** the nightly numbers gather on their own into one clear morning summary, with anything unusual flagged, on their own server.

Replaces **hours of manual work each night** · issues flagged same-day · your own server

Palette Wealth
WEBSITE & BRAND · In design

Private wealth management · family-office advisory

The problem: a wealth practice that had to earn family-office trust before the first conversation. **What we built:** a private, elegant brand experience, credible from day one, ready to extend into a client portal and CRM.

Design-led · credibility-first · built to extend into a client portal & CRM

Chanakya
ATELIER & ARCHIVE · Client

Luxury craft · haute-couture hand-embroidery atelier

The problem: an atelier tracking orders on paper, with past designs at risk of leaking before a show. **What we built:** one simple, private system, a live view of every order and a searchable archive of past pieces, kept fully in-house.

WHY KAUTILYA

- We start from your problem, we learn how your business runs, then build software around it, not the other way round.
- Software you own, no SaaS lock-in, no per-seat pricing; deployed on your infra or run by us.
- Mumbai-based & senior-led, a team you deal with directly, built for family businesses and established operators.
- AI-native, modern AI used only where it removes real work, never as a buzzword.

Let's build the software *behind your business.*

Tell us the process eating your team's time, we'll scope a custom tool, automation, CRM, dashboard or site, built and run for you or on your own infra.
